PROFESSIONAL EXPERIENCE

Software Engineer, **Pharmacy & Acute Care University** *Feb 2026 – Aug 2026*
Contract, Remote

- Fixed production learning-progress defects that displayed completion above 100%, omitted required readings, and desynchronized FastTrack status; unified completion checks across five code paths.
- Implemented certificate achievement records with idempotent writes, database uniqueness constraints, migration and backfill support, and authorization coverage; validated the change with 51 passing tests.
- Built development-to-production content-promotion tooling with completeness checks, snapshots, transactional writes, identifier preservation, rollback, and post-write integrity verification.
- Scoped specialty-review exam lookups to the correct enrollment and corrected course-group mapping so results from other enrollments would not affect access decisions.

Freelance Software Engineer, **Upwork** *Jan 2025 – Present*
Remote

- Restored client workflows by resolving 12+ production-blocking defects with an average turnaround under 24 hours.
- Delivered three client-facing features spanning React and TypeScript interfaces and Node.js backend services for remote clients.
- Automated release workflows, eliminating 15+ manual steps and saving approximately four engineering hours per week.
- Documented REST APIs and reduced contributor onboarding from one week to two days.

Software Monitoring Engineer, **Wind's Gate Philippines** *Jun 2025 – Present*
Cebu City

- Monitored eight production services and identified and escalated 25+ incidents before they reached end users.
- Standardized Tier 1 recovery procedures in eight runbooks, enabling engineers to resolve issues without escalation and reducing average triage time by 30%.

SELECTED PROJECTS

PriceCraft, Offline-Capable Recipe Costing PWA pricecraft.netlify.app
Technologies: TypeScript, React, Supabase, PostgreSQL, Tesseract.js, Vitest

- Built offline guest workflows with local recipe storage, migration after sign-in, and Supabase synchronization so users can start without an account or connection.
- Integrated receipt OCR with user confirmation to populate ingredient catalogs and update price history; supported shared recipe costs and product variants.
- Implemented ingredient, labor, and overhead costing with markup and profit-margin pricing, break-even analysis, and per-unit and batch profit calculations.

HEALTH, Civic Health Mobile App – Hackathon Prototype github.com/jlescarlan11/health
Technologies: React Native, Expo, Node.js, Prisma, PostgreSQL, SQLite, Gemini API

- Led a five-person team to the top 15 of 200+ teams at the 1st Naga City Mayoral Hackathon, delivering symptom assessment, nearby-facility discovery, medication records, and YAKAP enrollment guidance.
- Designed the flow from deterministic safety checks to Gemini-assisted assessment, plus SQLite-backed offline records and synchronization with a Node.js, Prisma, and PostgreSQL backend.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Python
Frontend and Mobile: React, Next.js, React Native, Expo, Tailwind CSS, TanStack Query
Backend and Data: Node.js, Express.js, REST APIs, PostgreSQL, Supabase, Prisma, SQLite
Testing and Delivery: Vitest, Git, GitHub Actions, CI/CD, Docker, Postman
Integrations: Tesseract.js, Gemini API, PayMongo, n8n, OpenAI API, Groq API

EDUCATION

Bachelor of Science in Computer Science *Expected Aug 2027*
University of the Philippines Cebu *Aug 2025 – Present*
University Scholar; DOST Junior Level Science Scholarship Awardee.
Previous studies: BS Mathematics, UP Cebu; College Scholar. *Sep 2022 – Jun 2025*
